Gait & Posture Gait & Posture is a vehicle for the publication of up-to-date basic and clinical research on all aspects of locomotion and balance. The topics covered include: Techniques for the measurement of gait and posture, and the standardization of results presentation; Studies of normal and pathological gait; Treatment of gait and postural abnormalities; Biomechanical and theoretical approaches to gait. INSTRUCTOR BIO Clinical Analysis of Various Adult Foot Types This program offers a comprehensive approach to determining orthotic intervention that combines traditional with contemporary theory to provide a. Inverse Dynamics - Clinical Gait Analysis Inverse Dynamics The ultimate aim of biomechanical analysis is to know what the muscles are doing: the timing of their contractions, the amount of force generated (or moment of force about a joint), and the power of the contraction - whether it is concentric or eccentric.. These quantities can be derived from the kinematics using the laws of physics, specifically the Newton-Euler equations:.

Hypokinesia - Wikipedia Pathophysiology Associated neurotransmitters. Dopamine. The main neurotransmitter thought to be involved in hypokinesia is dopamine. Essential to the basal ganglionic-thalamocortical loop, which processes motor function, dopamine depletion is common in these areas of hypokinetic patients. Bradykinesia is correlated with lateralized dopaminergic depletion in the substantia nigra. The Windlass Mechanism of the Foot | Running Research Junkie The windlass mechanism of the foot is an important and integral structure for normal foot function. The windlass mechanism consists of the plantar aponeurosis, which is for all intents and purposes the same thing as the plantar fascia (I don't want to argue semantics). It attaches to the plantar.
